

METHOD, SYSTEM, AND PROGRAM FOR
DUAL AGENT PROCESSES AND DUAL ACTIVE SERVER PROCESSES

ABSTRACT

Disclosed is a method, system, and program for task processing and monitoring of configuration and state information. A first server process and a second server process are detected. A first agent process is registered with the first server process. A second agent process is registered with the second server process. When a task is to be executed by the first server process, the task is executed with the first agent process. When the task is to be executed by the second server process, the task is executed with the second agent process.
